## .....ColorGATE

Productionserver 6

Simply more productive

.....ColorGATE

### Productionserver 6 Color Copier Edition The HighEnd RIP for toner-based color copier systems

- Professional color management: Recalibrate PostScript capable printing systems easily, quickly and reliably and standardize their color output
- Intelligent media management: Automatic paper selection, automatic adaptation of the printing output to available paper sizes
- Perfect network integration: Can be accessed from any workstation and from any application
- Can be extended to include contract proofing according to the ISO 12647-7 standard and the reference values based on FOGRA 39 guidelines

The alternative in performance, price and quality

### Productionserver 6 Color Copier Edition: The HighEnd RIP for toner-based color copier systems

#### The waiting is over

With the Productionserver 6 Color Copier Edition, one of the most well-known, globally leading RIP software solutions can now also be used for tonerbased color copier systems. And the value-formoney factor? - Absolutely sensational!

#### The concept

For years, ColorGATE has been setting standards in the industry again and again for digital largeformat printing in the inkjet sector. Thanks to pioneering extensions of the modular software architecture in combination with highly innovative driver technology, the entire range of the Productionserver's functions can now be used on all toner-based PostScript capable systems in the finest quality, whereby they are, of course, also still available without any restrictions as office printers or copy stations.

A special virtual printer driver provides for the homogeneous integration of the new features into existing network structures and their control from any workstation and from any application - it just doesn't get any easier than that!

#### Greater reliability and efficiency

Toner-based printing systems are known to be susceptible to fluctuations in color quality. Now, thanks to Media Device Synchronization MDS, this problem has become a thing of the past: this unique module, included as a standard feature in the Productionserver 6 Color Copier Edition, enables the direct, fast recalibration of all the printing systems connected; any color deviations are corrected in a flash.

#### Higher productivity

Multifunctional printing, of business cards, for example, in professional quality on one printed sheet – other systems would just have to give up or require expensive additional extensions. For the Productionserver 6 Color Copier Edition, jobs such as this are a breeze, including the intelligent adaptation of the printing output to the available paper sizes.

#### Upgradeable

Saves both time and money: the optionally available Proofgate Module PGM makes it possible not only to produce legally binding digital proofs for the LFP jobs according to the ISO 12647-7 standard, but also enables you to conveniently standardize all toner-based and LFP systems in your production environment.

#### The Productionserver 6 Color Copier Edition at a glance

**Productionserver 6 Color Copier Edition** Integrated modules: Media Device Synchronization MDS · Color Correction · Color Replacement · Color Copier COCM. Output Management: 5 Hotfolders · 1 Queue · 1 RIP Process · € 3.490<sup>1</sup> 1 Color Copier Printer Driver

#### Proofgate Module PGM

Creation of color and legally binding proof prints according to ISO 12647-7 with an integrated, licensed FOGRA media wedge. Verifying and certifying for popular printing standards € 750 and individual house standards

For more information and consulting services, please do not hesitate to contact

Productionserver 6 Color Copier Set Integrates toner-based color copier systems seamlessly into existing Productionserver 6 production environments. Includes Color Copier COCM and € 1.998
